December 30, 2016

To whom it may concern:

Digi International, due to an oversight, did not thoroughly document a firmware update for the XBee-PRO 802.15.4 radio product. This update set the highest available channel at 2465 MHz. The corresponding regulatory test code was also changed to have this highest frequency.

There will be no changes to firmware to increase this frequency back to 2470 MHz.

Regards,

A handwritten signature in black ink, appearing to read "Daniel Kobylarz", written over a horizontal line.
